GAC Hong Kong

Time Definite Solutions with SeaAir Service

GAC Hong Kong has been engaged in shipping services since its establishment in 1974. As one of the leading ship agents in Hong Kong, GAC provides a complete range of shipping services, including SeaAir service that combines the strengths in sea and air freight to provide the supply chain solution for merchants looking for a significant cost advantage or those operating with low inventories in rapidly changing industries such as electronics, fashion and footwear.

GAC Hong Kong offers SeaAir trade lanes which span from Asia, to Europe and the United States, and allows you to choose your hub either via Dubai or Singapore, where GAC operates dedicated cargo handling facilities. Fast and flexible, GAC SeaAir service enables shippers to save up to one third on "all air" costs and 40 per cent on "all sea" transit times.

At Origin

Cargo is received at our dedicated container freight station (CFS) at origin, and loaded into GAC's own consolidation or complete FCL containers. All sea/air cargo is labeled by special colour code, indicating origin and other consignment specifications. Cargo is then shipped by sea to our own hub operations of your choice.

At Consolidated Hub

Containers are handled at our dedicated CFS, where labeled sea / air cargo is flagged for expedited transfer to the airport. Port-to-airport transfer is carried out by GAC's own dedicated truck fleet. Cargo is loaded onboard regular scheduled cargo flights to final destination.

At Destination

GAC's destination agents notify receivers on the safe arrival of cargo and make to-door delivery according to instruction.

What makes GAC SeaAir Service special?

- Combines economy of ocean freight and speed of air freight
- Safe handling of cargo through GAC's own hub operations
- Guaranteed transit time
- Competitive rates - flat fees available in 3 tiers, and on per kilo basis
- Flexibility to choose your own hub
- Exclusive agreements with air and sea carriers
- Cargo visibility through IT tracking system
- Two LCL services per week
