GAC Samudera Logistics Services

Delivering end-to-end logistics solutions throughout Indonesia

We’re in business to help drive your business. We have the skills, local knowledge and network to speed up your freight through any road-blocks.
GAC Samudera is a modern company equipped with advanced logistics and warehouse management systems, and has multi-modal transportation capabilities and experience. Our services cover most parts of Indonesia. As a joint venture company between GAC and Samudera Indonesia, our reach extends beyond Indonesia to more than 50 countries through our over 300 offices worldwide.

PT GAC Samudera Logistics (GSL) and PT GAC Samudera Freight Services (GSFS) are joint ventures between the GAC Group and Samudera Indonesia Group. Today, we are one of the country’s leaders in the provision of customised supply chain solutions.

Multi-modal transportation
Whether it’s sea freight, air freight or road transportation, our wide selection of transportation modes may be tailored to suit your timeline and budget.

Our global partnership agreements with major sea and air carriers enable even the most urgent requests to be met quickly at competitive rates.

Security is a top priority at GAC Samudera. We are compliant with measures such as C-TPAT and AMS to ensure the highest security standards for you.

Warehousing and distribution
GAC Samudera operates one of Indonesia’s most advanced and modern distribution centres in Cikarang, East Jakarta, enabling you to outsource your logistics needs with complete confidence.

Our flagship facility offers a total of 60,500 pallet positions in selective racking. We also operate multi-user distribution centres in Medan, North Sumatera and Surabaya in East Java.

We focus our expertise and knowledge on meeting your needs for safe storage, fast order response and minimum inventory throughout Indonesia.

Key design and operational features include:
- Web enabled IT systems for supply chain visibility and inventory control
- Dedicated cross dock facility
- Temperature controlled storage options for perishables
- Hygiene standards to suit food and sensitive product storage
- Dedicated value-added service areas which meet Good Manufacturing Practise (GMP) standards for promotional packing, labelling and component assembly

SCOPE OF WORK
- Warehousing
- Project Logistics
- Warehouse Management
- Land Transportation
- Value-added Services

SECTORS WE SERVE
- FMCG & Pharmaceuticals
- Fashion, Toys & Footwear
- Automotive, Spare parts & Electronics
- Tools & Machinery
- Oil & gas, Material Construction
- Cold Storage (meat, Chicken, Ice-Cream etc)

VALUE-ADDED SERVICES
Customised rework processing requested by you and specially dedicated to you

GSL currently handles an average of four million pieces of various products per month through our in-house co-packing department.

Types of work
These are the VAS activities that we are currently handling for our clients:
- Multi product bundling
- Giveaway insertion or bundling
- Promotional re-packaging
- Labelling, stamping, stickering, wrapping
- Sticker or barcode removal
- Seasonal sales promotional material insertion, e.g. leaflets, product on product etc

Flexibility to customise
We have the resources to provide these value-added services upon your request. These activities may fall outside the core operations of your company, but are of critical importance. We can help to handle this additional process for you. In short, we can customise our services to suit your business needs.
GSL is able to provide our clients with online access to our Warehouse Management System (WMS), which provides real-time data. You can access various reports that are already available on the web module, or the reports can be customised according to your requirements.

**GACWare**

Through our in-house capabilities, we have developed GACWare, our very own WMS and Transport Management System (TMS). Some salient features of our GACWare include:

- Sybase back-end and PowerBuilder front-end, runs on Windows operating system
- Experience in interfacing with major ERPs (SAP, BPCS, JDE, Oracle, etc)
- Ability to provide management information on a periodic basis as required for various warehousing and distribution activities
- Typical KPIs include: Case fill, order fill, on-time delivery, inventory accuracy, etc
- Timely upgrades to accommodate new technology and also to incorporate new processes and best practices
- Operationally robust and time-tested
- Built-in transport management modules for route planning, delivery and POD monitoring
